AMENDMENT

IN THE CLAIMS:

- Of
- 1. (Currently Amended) A composition of matter consisting essentially of an isolated polypeptide shown in SEQ ID NO:2 or a phenotypically silent amino acid substitution variant thereof that specifically binds to an anti-Ehrlichia antibody.
- 2. (Currently Amended) The composition of claim $2\underline{1}$, further comprising a carrier.
- 3. (Currently Amended) An article of manufacture comprising packaging material and, contained within the packaging material, a polypeptide consisting essentially of the polypeptide shown in SEQ ID NO:2 or a phenotypically silent amino acid substitution variant thereof that specifically binds to an anti-Ehrlichia antibody.
- 4. (Previously Presented) The article of manufacture of claim 3 wherein the packaging material comprises a label that indicates that the polypeptide can be used for the identification of *Ehrlichia* infection in a mammal.
- 5. (Currently Amended) The article of manufacture of claim 4, wherein the label indicates that identification of an *Ehrlichia* infection is done using a method of detecting presence of antibodies to *Ehrlichia* comprising:
- (a) contacting a polypeptide <u>consisting essentially of the polypeptide</u> shown in SEQ ID NO:2 or a phenotypically silent amino acid substitution variant of the polypeptide shown in SEQ ID NO:2 <u>that specifically binds to an anti-Ehrlichia</u> antibody, with a test sample suspected of comprising antibodies to *Ehrlichia*, under conditions that allow polypeptide/antibody complexes to form; and
- (b) detecting polypeptide/antibody complexes; wherein the detection of polypeptide/antibody complexes is an indication that an *Ehrlichia* infection is present.

- 6. (Previously Presented) The article of manufacture of claim 4, wherein the *Ehrlichia* infection is caused by *Ehrlichia canis* or *Ehrlichia chaffeensis*.
- 7. (Currently Amended) A composition of matter consisting essentially of an isolated polypeptide shown in SEQ ID NO:2 or a conservative amino acid substitution variant thereof that specifically binds to an anti-Ehrlichia antibody.
- 8. (Currently Amended) An article of manufacture comprising packaging material and, contained within the packaging material, a polypeptide consisting essentially of the polypeptide shown in SEQ ID NO:2 or a conservative amino acid substitution variant thereof that specifically binds to an anti-Ehrlichia antibody.
- 9. (Currently Amended) The article of manufacture of claim 4, wherein the label indicates that identification of an *Ehrlichia* infection is done using a method of detecting presence of antibodies to *Ehrlichia* comprising:
- (a) contacting a polypeptide <u>consisting essentially of the polypeptide</u> shown in SEQ ID NO:2 or a conservative amino acid substitution variant of the polypeptide shown in SEQ ID NO:2 <u>that specifically binds to an anti-Ehrlichia antibody</u>, with a test sample suspected of comprising antibodies to *Ehrlichia*, under conditions that allow polypeptide/antibody complexes to form; and
- (b) detecting polypeptide/antibody complexes; wherein the detection of polypeptide/antibody complexes is an indication that an *Ehrlichia* infection is present.
